Dear Dr. Sujitav Dash,

The Delve project is currently reviewing the knowledge products and data related outputs generated as a part of the EGPS Emergency Response effort in an effort to integrate project outputs into the Delve platform. Patricia has organized and shared a number of project knowledge products that were developed through the funded programs. In reviewing the materials I had a few follow-up questions for you related to data and knowledge products produced by the effort. The analysis and surveys that you've put together are some of the best I've seen among the programs. In a number of assessments you reference survey data that was used and produced tables shared in the annexes of most assessments. We would welcome the opportunity to create some data visualizations from this data to include on the Delve India country page. ***Could you let me know if there exists a shareable respondent dataset for the survey(s) noted?***

- A Baseline Study of ASM Communities – Report: Survey of N=387
- A study on ASM Gold Value Chain in KBK Districts, Odisha, India: Survey of N=187
- A study on ASM Gemstone Value Chain in KBK Districts, Odisha, India: Survey of N=200

Best regards,  
Nathan
